EDUCATION

Rutgers University, School of Arts and Sciences | Rutgers Business School – New Brunswick, NJ

May 2027

*Bachelor of Science in **Data Science & Finance** | Bachelor of Arts in **Economics***

Activities: NCAA D1 Track & Field / Cross Country

SKILLS & CERTIFICATIONS

Programming & Analytical: R, SQL, Regression Modeling, Machine Learning (LASSO), Hypothesis Testing, Data Visualization

Baseball: Arbitration, Trackman, TruMedia, 6-4-3

Business Certifications: Rapsodo Pitching, Securities Industries Essentials, Bloomberg Market Concepts

RELEVANT COURSEWORK

Data Science: Calculus I-II, Linear Algebra, Statistics, Information Visualization, Data Inference

Economics: Econometrics, Microeconomics I & II, Macroeconomics I & II

Finance: Derivatives, Investment Banking Analysis, Corporate Finance,

EMPLOYMENT EXPERIENCE

Rutgers Football | Incoming Research and Development Intern | Piscataway, NJ

June 2026 – Present

- Clean data sets in R to ensure R&D department can efficiently perform player analysis.
- Support development of analytical reports for recruiting evaluations, talent identification, and football operations decision-making.

Rutgers Baseball | Baseball Operations Intern | Piscataway, NJ

January 2025 – Present

- Architected a modular R analytics framework transforming raw Trackman pitch data into automated performance reports and advanced pitch value metrics.
- Implemented custom modeling workflows including logistic strike zone calibration, outs-based run expectancy estimation, and EV/LA-driven xwOBACON prediction.
- Quantified pitch effectiveness across decision, execution, and outcome layers by integrating plate discipline metrics with contact quality modeling.
- Operate Trackman game logging responsibilities for home contests, capturing pitch classification, pitch outcomes, and batted-ball events to maintain high-quality datasets.

Foul Territory Network | Baseball Research Intern | Orlando, FL

August 2025 – April 2026

- Produced analytical outlooks on arbitration eligible players, Rule 5 decisions, and free-agent markets using Spotrac AAV projections.
- Synthesized statistical research into clear, story-driven reports that enhanced interview preparation for hosts, supporting on-air analysis and baseball operations discussions.

PROJECTS

MLB Arbitration Salary Analysis | Independent Research Project

May 2026 – Present

- Merged and cleaned salary data from Spotrac with Statcast pitching metrics to create a research dataset of 124 arbitration eligible starting pitchers (2016-2026).
- Estimated log-salary regression models with year-fixed effects to identify factors associated with arbitration awards.
- Identified Innings pitched and ERA as strongest predictors of first-year arbitration salaries (Adj. $R^2 = 0.56$).
- Applied LASSO regularization with cross-validation in R to compare econometric and machine-learning approaches to arbitration salary prediction.
- Developed presentation-ready visualizations and forecasting models to evaluate arbitration outcomes and player valuation.
